

# P O N D Y A N A L M A N A C K

for the Year of our

L O R D G O D

1 6 8 5.

Being the first after Bissextile or Leap-  
year, and from the worlds Creation at the  
Spring 5688 years Complear.

Amplified with many good things both  
for pleasure and profit: and fitted for  
the Meridian of *Easton-Walton* in *Essex*,  
where the Pole is elevated 52 degrees and  
16 minutes above the Horizon.

And may serve indifferently for any other  
place of this Kingdom.

C A M B R I D G E,

Printed by *John Hayes*, Printer to the  
University, 1685.

**Pond 1685.**

**The vulgar Notes and moveable Feasts for this  
Year in both Accounts, viz.**

<i>Julian or English.</i>			<i>Gregorian or Forreign.</i>

**The Sun's entrance into the four Cardinal Signs.**

**H**E enters *Aries*, *March* the 9 day, at 8 at night, at which time the Figure of the Heavens will appear as followeth, viz. 23 degrees of ♈ Ascending in the East, 21 degr. of ♎ descending in the West, 28 degrees of ♊ culminate, 6 degrees of ♋ are upon the Cusp of the 11 house, where the infortune ♄ is, and 3 degrees of ♈ upon the Cusp of the 12 house where ♄ is retrograde.

He enters ♋ June the 10, 40 m. past 10 at night.

He enters ♌ Septem. 12, at 2 afternoon.

He enters ♏ Decem. 11, at 2 in the morning.

**M**Arriage comes in on the 13 day of January, and at Septuagesima Sunday it is out again untill Low-sunday; at which time it comes in again, and goes not out till Rogation-sunday: thence it is forbidden untill Tri-ity-sund. from whence it is unforbidden till Advent-sunday: but then it goes out, and comes not in again till the 13 day of January next following.

The

# The beginning and ending of the Terms.

Hillary Term begins January 23, ends February 12.

Easter Term begins May 6, ends June 1.

Trinity Term begins June 19, ends July 8.

Michaelmas Term begins Octob. 23, ends Novem. 28.

A Table shewing how many years Purchase a Lease or Annuity to endure for any number of years under 30, is worth presently, at interest upon interest, at six in the hundred, and shewing also how to discount any Lease in being, and the true value of the Reversion after any number of years.

Years of a Lease	Years.	Months.	Dec. parts
1	0	12	0
2	1	0	9
3	2	8	1
4	3	5	9
5	4	4	5
6	4	11	0
7	5	2	0
8	6	2	5
9	6	9	6
10	7	4	3
11	7	10	7
12	8	4	6
13	8	10	3
14	9	3	6
15	9	8	5

## The use and Explanation of this Table.

The first Column at the left hand sheweth the years of a Lease, or Annuity, and right against each year are the years, months, and decimal parts of a months purchase that such a Lease or Annuity is worth.

### Example.

Suppose a Lease or Annuity to continue 18 years, and you would know how many years purchase it is worth in ready money, look in the Column of the years of a Lease, for 18 years, and against the same you shall find 10, 9, 9. which shews such a Lease to be worth 10 years,

Years of a Lease.	Years.	Months.	Dec. parts
16	10	1	3
17	10	5	8
18	10	9	9
19	11	1	3
20	11	5	7
21	11	9	3
22	12	0	5
23	12	3	6
24	12	6	6
25	12	9	4
26	13	0	0
27	13	2	5
28	13	4	9
29	13	7	1
30	14	9	3

9 months, and 9 ten parts of a months purchase. So that the yearly rent being 12 pound, the value will be thus found.

But if you buy the Reversion of a Lease now, as suppose a Lease of 30 years continuance, and you commence

not till 5 years be past, in this and such like cases, look for the present worth of the Lease, as this of 30 years, which will be found worth 11 years, 5 months, 7 tenths of a months purchase, then look the present worth of a Lease of 5 years, which will be found worth 4 years, 2 months, 5 tenths, take this out of 11 5 7 and there remains 7. 3. 2. which are 7 years, 6 months, 2 tenths of a months purchase; and so much is the Reversion of the Lease of 30 years, after 5 years worth be expired.

16	5	4
10 times 12 is	120	0 0
12 <sup>th</sup> in 9 mon. is	9	0 0

June 1685.

On the 5 day of this month, in the year of the *Julian Period* 2366, that is 1566 years after the Creation, the Floud came, which was on a *Friday*, the Domincal Letter being D at that time, which circumstance of time is worth the noting; seeing on the 6 day of the week God made both Man and Beast, so on the same day of the week He sends a Floud to destroy them.

# July hath xxxi days.

Q. Elizab.	1558	Nov. 17	44 y	4 m	15 d	127	Q. Mary
K. James	1603	Mar. 24	22 y	0 m	3 d	82	Q. Elizab.
Charles	1625	Mar. 27	22 y	10 m	3 d	60	K. James
Charles	1649	Jan. 30	Longlive the King			36	K. Charles

## The use of the Table in Example.

King Henry 8 began his Reign in the year of Christ 1509, April 22. He Reigned 37 years, 10 months, and 2 days. It is since he began his Reign 176 years compleat the 22 of April this year 1685. Now to know the time since the end of his Reign, before his name standing on the right hand, you shall there find 138 years since he died, Jan. 28. And so of the rest.

Hundreds Market-Towns. Parishes. Arch-B. Shopricks 2

768. 713. 9241. Bishopricks 24

# The Explanation and use of the foregoing Table, with some observations of *England*.

**T**He Table consisting of several Columns, is plain and easie; in the first column towards the left hand, is a Catalogue of all the Shires in *England* and *Wales*, right against each of which, under their proper Titles, are the number of Parliament Men, Hundreds, Market-Towns and Parishes contained in the same, as also the Length, Breadth, and Circumference of the Shire, with the name of the Chief Town thereof, and its Distance and Situation from *Cambridge*.

As for Example,

I desire to know all the forementioned things, in or belonging to *Norfolk*, I look for *Norf.* in the first column (the Shires being in an Alphabetical order) and right against the same I find, 12 Parliament Men, 31 Hundreds, 28 Market-Towns, 660 Parishes, its length 50 mil. breadth 30, circumference 240, the chief Town *Norwich*, its distance from *Cambridge* 49 miles, and its situation from thence North East, signified by N. E. thus in like manner, is to be done for any other Place.

*England*, being the Chiefest and pleasantest part of Great Britain is trebly divided, 1 into six Circuits, designated to the Itinerary Judges, 2 into 22 Episcopal Diocesses, 3 into 40 Shires; the Shires were first made by King *Alfred*, for the easier and speedy administration of Justice. This King also divided his Subjects into tens, or Tythings, every of which severally, should give bond for the good behaviour of each other; ten of the mightiest Tythings made the Lesser division which we call Hundreds, which name cannot be derived from the number of Villages, none of our Hundreds being so large: these Hundreds are called Wards in *Cumberland*, *Westmorland*, *Durham*, *Northumberland*: in every Hundred there's

*Pond 1685.*

A Constable called the Constable of the Hundred, who receives Warrants from the Sheriffs, or Justices, and dispatches them to the Constables of each Town and Village in his Hundred, for the effecting of publick bu-  
sineses. To enumerate the plentyies and ornaments of  
England requires more room than here is allotted, there-  
fore it may suffice to express some of her Excellencies in  
these verses. viz.

*England is stor'd with Mountains, Bridges, Wooll,  
With Churches, Rivers, Women beautifull.*

---

### Of the Eclipses this Year,

**T**His year there happens three Eclipses, viz. one of  
the Sun, and two of the Moon.

The first in order will be of the Moon, on the 6 day  
of June, at 6 of the Clock at night, it falls in 26 degr.  
of ♄: but will be invisible to us, because the Moon  
will then be below our Eastern, and the Sun above our  
Western Horizon.

The second will be an Eclipse of the Sun on the 21  
day of June, at 8 at night, in 10 degrees of ♄; but will  
scarcely be visible to us, because the Sun is just then  
setting.

The third will be a great Eclipse of the Moon  
on the 30 day of November, at 11 at night, it will be  
both visible, Total, and Central, being near 22 digits  
eclipsed, it happens in 12 degrees of ♀ the Ascendant  
of London. ♀ will be Lord of the Ascendant for my then  
Ascends, and the Eclipse falls in the 10<sup>th</sup> House; ♄  
is in ☐ to the Luminaries, and ♄ beholds the defect  
with an Opposition.

*Prognosticks of Pestilential and unwholsom Years.*

**I**T is observed by the Learned, that those Years are Pestilential and unwholesom, when there are great numbers of Frogs, Flies, Locusts, &c. the reason is, because those Creatures being ingendred of putrefaction, when they abound, shew a general disposition of the Year, and corruption of the Air, to Diseases of putrefaction: so likewise the same Prognostick holdeth, if you find Worms, in Oak Apples; for the constitution of the Air, appeareth more subtilly, in any of these things, than to the sense of Man.

Great and early Heats in the Spring (and namely in *May*) without Winds, portend also pestilent Years; and generally so do years with little Wind or Thunder.

Great Drought also in Summer, continuing till towards the end of *August*, and some gentle Showers upon them, and then some dry weather again; do portend a pestilent Summer the year following: because about the end of *August*, all the sweetness of the Earth, which goeth into Plants and Trees, is exhaled; (and much more if *August* be dry) so that then nothing can breath forth of the Earth, but a gross Vapor which is apt to corrupt the Air: and that Vapor by the first Showers, if they be gentle, is released, and cometh forth abundantly; therefore they that come abroad soon after those Showers are commonly taken with Sicknesse. And in *Africk*, no body will stir out of doors after the first Showers: but if the Showers come vehemently, than they rather wash and fill the Earth, than give it leave to breath forth pleasantly. But if dry weather come again, than it fixeth and continueth the corruption of the Air, upon the first Showers begun, and maketh it of ill influence, even to the next Summer, except a very frosty Winter discharge it, which seldom succeeds.

*Pond 1685.*

The lesser Infection of the Small Pox, Purple Feavers, Agues, in the Summer precedent, and hovering all Winter, do likewise portend a great Pestilence in the Summer following; for putrefaction doth not rise to its height at once.

A dry *March*, and a dry *May*, portend a wholesome Summer, if there be a showring *April* between: but otherwise it is a sign of a pestilential Year.

Furthermore, because the Air according to its situation doth much alter and change the Constitution of Mans body, and may breed pure and wholesome Blood, or corrupt and bad Blood, and malignant Humors. Therefore that you may know what Air is pure and sound, and what Air corrupt and infectious, we will add some Experiments, which the Judicious have observed, whereby you may conjecture how the Air is disposed; and that first,

A sound and pure Air is made hot presently after Sun rising, and is made cold presently after Sun-setting.

Which yieldeth a pleasant smell after Rain, clear and not evaporated, open and light, where the North wind bloweth, and where the East wind bloweth in the morning.

A corrupt and infectious Air, is made by the often blowing of the South or South-east wind, or by the South-west, or West in the evening, which ingender Sicknesses.

Where the Air is cold long after Sun-rising.

Where the Air is long hot after Sun-set.

Where the Air is long close, cloudy, or thick.
